

The electric industry restructuring law passed in 1997 by the Illinois General Assembly provides many benefits for all customers. As part of this law electric utilities and suppliers are providing an Environmental Disclosure Statement for the twelve months ending every quarter.

The information on this statement shows the breakdown of the different sources that generated electricity for ComEd customers and the average amounts of emissions and nuclear waste produced, between 7/1/04 AND 6/30/05.

For comparison purposes, the following shows the Midwest Electric Power Industry averages for sources of electricity generation and emissions for 2001*. 82 percent of ComEd's electricity is generated by nuclear power, 1 percent is generated by natural gas-fired power, and 1 percent is produced by biomass. Both nuclear power and natural gas-fired power have lower emissions of carbon dioxide, nitrogen oxides and sulfur dioxide than coal-fired generation. Because of that, our emission rates are 65% less than the Midwest Electric Power Industry average for carbon dioxide, 83% less for nitrogen oxides, and 92% less for sulfur dioxide.

(Midwest Electric Power Industry Sources—rounded to the nearest whole percent)

Coal-fired power	70%
Hydro power	less than 1%
Natural gas-fired power	4%
Nuclear power	24%
Oil	less than 1%
Renewables	1%
(includes geothermal, biomass, wind, solar, thermal and photovoltaics)	

(Midwest Electric Power Industry Emissions—pounds per 1,000 kilowatt-hours)

Carbon dioxide	1,573.57 lbs.
Nitrogen oxides	5.29 lbs.
Sulfur dioxide	14.03 lbs.

The 2005 Northwestern University Solar Car Team and "NuNergy."

ComEd Sponsors Northwestern University Solar Car Team

The Northwestern Solar Car Team unveiled their latest project "Nu-Nergy," a solar powered vehicle that can reach top speeds of over 70 miles per hour. The ComEd sponsored team is a student organization dedicated to designing, building and racing solar electric vehicles. This year, after undergoing a rigorous series of mechanical, electrical, driver safety tests, and qualifying laps, the Northwestern team was one of the first five teams out of 30 to qualify for the North American Solar Challenge, a 2500 mile cross country solar car race from Austin Texas, to Calgary, Alberta.

For more information on the race, visit www.americansolarchallenge.org, or <http://nusolar.org>.

Environmental Disclosure Information

Twelve Months Ending June 2005

The information contained in the Environmental Disclosure Statement is required by the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission.

ComEd's Environmental Disclosure Statement

The disclosure of this information is required under Section 16-127 of the Electric Service Customer Choice and Rate Relief Law of 1997 and the rules of the Illinois Commerce Commission, 83 Ill Admn. Code 421.

Sources of Electricity Supplied for the 12 months ending June 30, 2005	Percentage of Total
Biomass power	1%
Coal-fired power	16%
Hydro Power	0%
Natural gas-fired power	1%
Nuclear power	82%
Oil-fired power	0%
Solar power	0%
Wind power	0%
Other resources	0%
Unknown resources purchased from other companies	0%
TOTAL	100%

Sources of Electricity Supplied for the 12 months ending June 30, 2005

AVERAGE AMOUNTS OF EMISSIONS and AMOUNT OF NUCLEAR WASTE per 1000 kilowatt-hours (kWh) for the 12 months ending June 30, 2005 ¹	
Carbon dioxide	544.7 lbs.
Nitrogen oxides	1.0 lbs.
Sulfur dioxide	1.2 lbs.
High level nuclear waste	0.006 lbs.
Low level nuclear waste	0.0005 cubic feet

¹ < 1% of the total electricity supplied was purchased from other suppliers and the amounts of emissions and amount of nuclear waste attributable to producing this electricity is not known and is not included in this table.

Additional information on companies selling electrical power in Illinois may be found at the Illinois Commerce Commission's World Wide Web site www.icc.state.il.us.
